

Greetings,

Please stop allowing our tax dollars as "clean" energy renewable energy credits and incentives for dirty wood burning biomass plants. Instead, please direct such \$\$ to genuinely clean energy alternatives such as solar, geothermal, appropriately located wind and hydro, and conservation and efficiency measures.

Also, please stop permitting new wood burning biomass electric plants and stop promoting and incentivizing other wood burning biomass plants

Finally, will you please take a harder look at the carbon impacts of CHP (combined Heat and Power) biomass plants. The Manomet study used unreasonable assumptions to make forest burning biomass look "less bad"

than it really is. The model analysis needs to be more realistic to match the realities on the ground.

Thank you.
